Q1. Explain the role of the LLMHandler class in the Interview Prep Coach application.

■ LLMHandler · 3 marks · MEDIUM

Answer: The LLMHandler class acts as an abstraction layer between the application and the LLM, handling tasks such as generating questions, providing hints, evaluating answers, and generating follow-up questions.

Q2. Describe the purpose of the prompts.py file in the Interview Prep Coach project.

■ prompts.py · 3 marks · MEDIUM

Answer: The prompts.py file contains a library of prompt templates used to interact with the LLM, including templates for generating questions, hints, evaluations, and follow-up questions.

Q3. What is the function of the ChatPromptTemplate class in the LangChain framework?

■ LangChain · 3 marks · MEDIUM

Answer: The ChatPromptTemplate class is used to construct structured prompts for the LLM, allowing for the combination of system and user messages into a single prompt.

Q4. Explain the concept of temperature in the context of Large Language Models.

■ LLM Concepts · 3 marks · MEDIUM

Answer: Temperature controls the randomness of token sampling in an LLM, with a temperature of 0 resulting in deterministic output and a temperature of 1 resulting in more creative and varied output.

Q5. Describe the purpose of the `MOCK_DATABASE` dictionary in the `LLMHandler` class.

■ `LLMHandler` · 3 marks · MEDIUM

Answer: The `MOCK_DATABASE` dictionary provides a fallback mechanism for the `LLMHandler` class, allowing it to generate questions, hints, and evaluations even when no API key is provided or the LLM API is unavailable.

Q6. Explain the role of the `st.session_state` object in the Interview Prep Coach application.

■ `Streamlit` · 3 marks · MEDIUM

Answer: The `st.session_state` object is used to persist data across multiple runs of the application, allowing the application to maintain state and track the progress of the user.

Q7. Describe the difference between the `EVALUATION_SYSTEM` and `SUMMARY_SYSTEM` prompts in the `prompts.py` file.

■ `prompts.py` · 3 marks · MEDIUM

Answer: The `EVALUATION_SYSTEM` prompt is used to evaluate a single question-answer pair, while the `SUMMARY_SYSTEM` prompt is used to generate a holistic summary of the entire interview transcript.

Q8. Explain the purpose of the `ReportLab` library in the Interview Prep Coach application.

■ `ReportLab` · 3 marks · MEDIUM

Answer: The `ReportLab` library is used to generate PDF reports of the user's interview performance, providing a summary of their scores, strengths, and areas for improvement.

Q9. Describe the concept of prompt injection and its potential impact on the Interview Prep Coach application.

■ LLM Security · 3 marks · MEDIUM

Answer: Prompt injection occurs when a user manipulates the LLM's behavior by providing a carefully crafted input, potentially allowing them to bypass the application's intended functionality or extract sensitive information.

Q10. Explain the role of the LCEL pipe operator in the LangChain framework.

■ LangChain · 3 marks · MEDIUM

Answer: The LCEL pipe operator is used to compose prompt-to-model chains, allowing developers to create complex workflows involving multiple LLM calls and data transformations.
